

Getting your patients started

This checklist may help you complete and provide the necessary documentation required.

Please be sure to provide ALL required information listed below. Incomplete submissions may cause delays in your patients starting on Duopa.

Complete the DuoConnect Complete Enrollment and Prescription Form

- D Provide all patient demographic information, including authorized caregiver's name and phone number
- Provide all patient insurance information, including secondary and tertiary insurance information (photocopies accepted)
- Ensure the patient signs and dates the consent and selects a specialty pharmacy preference
- □ If patient resides in a Facility, please provide the facility's information (e.g. Name, contact, phone number, address)

Provide all proceduralist information

□ Include physician demographics, signature and date where indicated

□ Provide all prescription details, including:

ICD-10 Code

- No. of cassette boxes
- All pharmacy instructions (i.e., SIG lines)
 Pump lock level (only if requesting a programmed pump)
- Dose and flow rates
- Separate or alternative prescription, per state laws

Prepare supporting documentation

Minimum Medical Documentation That Must Be Submitted With This Form

Duopa coverage consideration for motor fluctuations requires medical records from the last 6 months by a neurologist who prescribes and manages treatment with carbidopa-levodopa. Submit copies of the following records—each box must be checked by the healthcare provider to indicate the documentation was submitted:

- Evidence of an evaluation by a neurologist who prescribes and manages treatment with carbidopa-levodopa
- Diagnosis of idiopathic Parkinson's disease

Include additional evidence of:

- Presence of bradykinesia
- Presence of at least one other cardinal symptom in addition to bradykinesia (i.e., tremor, rigidity, and/or postural instability)
- Duration of patient's condition
- Clinical course (worsening or improving)
- Prognosis

Motor complications documented with disabling "off" periods for a minimum of 3 hours/day

Include additional evidence of:

- Current treatment with carbidopa-levodopa
- Previous/Current treatment of at least one other class of anti-Parkinson's therapy (e.g., COMT inhibitor or MAO-B inhibitor)
- Other therapeutic interventions used and therapeutic outcomes
- Concomitant medications related and unrelated to Parkinson's disease
- Documentation that patient is levodopa-responsive
- □ Include additional evidence of clearly defined "on" periods

Common missing information that can cause delays in treatment includes:

- Supportive documentation of "off" periods – must be noted in hours/days
- Documented bradykinesia
- Physician signature and date on the prescription

The Specialty Pharmacy and/or DuoConnect Complete will contact you with questions and/or clarifications.

If you have specific questions regarding clinical documentation, you may contact the Specialty Pharmacy: Accredo 888.200.2811 • CVS 877.437.8469 • Pharmacy Solutions 877.648.3738

Fax all information to DuoConnect Complete to 1.844.844.2323					
 Completed DuoConnect Complete Enrollment and Prescription Form Must include HIPAA Authorization from page 4 	Questions?				
□ Patient Insurance Card(s)	DuoConnect Complete is here to help				
Must include a picture of the front and back of each insurance card being used	CALL 1.844.386.4968

Dosing Duopa Dose Calculations

General Dosing Considerations²

- Prior to initiating Duopa, patients should be converted from all other forms of levodopa to oral carbidopa / levodopa immediate release (CLIR; 1:4 ratio)
- Duopa (carbidopa and levodopa) enteral suspension is administered over a 16-hour infusion period. The daily dose is determined by individualized patient titration and composed of a Morning Dose, a Continuous Dose, and Extra Doses
- At the end of the daily 16-hour infusion, patients disconnect the pump from the PEG-J and may take their nighttime dose of oral CLIR and other Parkinson's medications as prescribed
- Maximum recommended dose of Duopa: 2000 mg of levodopa (one cassette per day) administered over 16 hours
- Patients should be prescribed oral CLIR in the event that they are unable to administer Duopa for >2 hours during the daily dosing period

Day 1: Duopa Dose Calculations²

Step 1: Morning Dose

- Determine the total amount of levodopa (in mg) in the first dose of oral CLIR that was taken by the patient on the previous day
- Convert that oral levodopa dose from milligrams (mg) to milliliters (mL) by multiplying the oral dose by 0.8 and dividing by 20 mg/mL. This calculation provides the Morning Dose of Duopa in milliliters
- Add 3 mL to the Morning Dose to fill (prime) the intestinal tube to obtain the Total Morning Dose
- O The Total Morning Dose is usually administered over 10 to 30 minutes

Step 2: Continuous Dose

- Determine the amount of levodopa that the patient received from oral CLIR doses throughout the previous day (16 waking hours), in milligrams. Do not include the doses of oral CLIR taken at night when calculating the levodopa amount
- Subtract the first morning oral levodopa dose in milligrams taken by the patient on the previous day (determined in Step 1a) from the total oral levodopa dose in milligrams taken over 16 waking hours (determined in Step 2a). Divide the result by 20 mg / mL. This is the dose of Duopa administered as a Continuous Dose (in mL) over 16 hours

EXAMPLE

Patient's Usual Oral Morning Levodopa Dose = 200 mg

- 200 mg × 0.8 Duopa Conversion Factor = 160 mg
- $2 \frac{160 \text{ mg}}{20 \text{ mg/mL}} = 8 \text{ mL Duopa Morning Dose}$
- 3 8 mL + 3 mL = 11 mL Total Morning Dose Volume

EXAMPLE

Previous Day's Oral Levodopa Dose = 1200 mg First Morning Oral Levodopa Dose = 200 mg

- 1200 mg 200 mg = 1000 mg
- 20 mg/mL = 50 mL 16 -hour Continuous Dose
- The hourly infusion rate (mL per hour) is obtained by dividing the Continuous Dose by 16 (hours)

Extra Doses

Duopa has an Extra Dose function that can be used to manage acute "off" symptoms that are not controlled by the Morning Dose and the Continuous Dose administered over 16 hours. The Extra Dose function should be set at 1 mL (20 mg of levodopa) when starting Duopa. Limit use to every 2 hours. Administration of frequent Extra Doses may cause or worsen dyskinesia.

Lockout Times³

The lockout time is the minimum amount of time which must elapse between the start of one dose and the start of the next.

Recommended Tubing Sets

AbbVie PEG 15 or 20 Fr and AbbVie J tubing are the recommended tubing sets for long-term PEG-J DUOPA administration.

Please see Indication & Important Safety Information on page 6. Please see accompanying <u>Full Prescribing Information</u> or visit www.duopa.com.

DuoConnect Complete Enrollment and Prescription Form

DUO:

FAX: 1.844.844.2323 PHONE: 1.844.386.4968

HIPAA AUTHORIZATION Please read the following, then date and sign where indicated on page 2, section 1. This page must be included when faxed.

I authorize my health care providers and staff, health plan, and pharmacies (collectively, my "Healthcare Providers") to disclose individually identifiable information about me, my health or condition(s), treatment and care that I have received, my insurance coverage, my payment information, and my medication history and prescriptions (collectively, "Protected Health Information") to AbbVie Inc. and/or its designated affiliates, agents, representatives, and service providers (collectively, "AbbVie") in order for AbbVie to (i) enroll me in, provide, operate and administer the DuoConnect Complete Program; (ii) provide me with information concerning the Program; and (iii) develop, evaluate, and improve products, services, materials, and programs related to my condition or treatment. I understand that Protected Health Information disclosed to AbbVie under this Authorization will no longer be protected by HIPAA and may be subject to redisclosure by AbbVie. I understand that if my Healthcare Companies use or disclose my Personal Information for marketing purposes, they may receive financial remuneration. I understand that I am not required to sign this Authorization and that my Healthcare Providers will not otherwise condition my treatment, payment, health insurance enrollment, or eligibility for health care benefits to which I am otherwise entitled on whether I sign this Authorization. However, I understand that if I do not sign this Authorization, I cannot take part in the Program. I understand that this Authorization will expire once I am no longer participating in the Program, unless I cancel it sooner. I understand that I may cancel this Authorization at any time by making a data subject rights request at https://abbviemetadata.my.site.com/AbbvieDSRM or by writing to privacydsr@abbvie.com. However, I understand that if I cancel this Authorization, it will end my enrollment in the Program. I understand that cancelling this Authorization will not affect any use or disclosure of my Protected Health Information that has already taken place in reliance on this Authorization.

Note: You have a right to receive a copy of this Authorization. You may print a copy of or save this Authorization and retain a copy for your records.

IMPORTANT SAFETY INFORMATION¹

DUOPA is **contraindicated** in patients who are currently taking or have taken (within 2 weeks) a **nonselective monoamine oxidase (MAO) inhibitor**, as concurrent use can cause hypertension. A percutaneous endoscopic gastrostomy with jejunal extension (**PEG-J**) **is contraindicated** with lack of transillumination / positive needle aspiration test; intestinal obstruction; sepsis; peritonitis; serious coagulation disorders; ascites; and neoplastic, inflammatory, and infiltrative diseases of the gastric and abdominal walls.

Because **DUOPA is administered using a PEG-J or naso-jejunal tube, gastrointestinal complications** can occur, including abscess; bezoar; ileus; implant site erosion/ulcer; intestinal hemorrhage, ischemia, obstruction, or perforation; intussusception; pancreatitis; peritonitis; pneumonia (including aspiration pneumonia); pneumoperitoneum; post-operative wound infection; and sepsis, any of which may require surgery or be fatal. Instruct patients to immediately report abdominal pain, prolonged constipation, nausea, vomiting, fever, or melanotic stool.

Please see accompanying full <u>Prescribing Information</u> or visit www.duopa.com. Please see additional Important Safety Information on page 5.

Indication²

DUOPA (carbidopa and levodopa) enteral suspension is indicated for the treatment of motor fluctuations in patients with advanced Parkinson's disease.

Important Safety Information^{2,4,5}

DUOPA is **contraindicated** in patients who are currently taking or have taken (within 2 weeks) a **nonselective monoamine oxidase** (MAO) inhibitor, as concurrent use can cause hypertension. A percutaneous endoscopic gastrostomy with jejunal extension (**PEG-J**) is **contraindicated** with lack of transillumination/positive needle aspiration test; intestinal obstruction; sepsis; peritonitis; serious coagulation disorders; ascites; and neoplastic, inflammatory, and infiltrative diseases of the gastric and abdominal walls.

Because **DUOPA is administered using a PEG-J or nasojejunal tube, gastrointestinal complications** can occur, including abscess; bezoar; ileus; implant site erosion / ulcer; intestinal hemorrhage, ischemia, obstruction, or perforation; intussusception; pancreatitis; peritonitis; pneumonia (including aspiration pneumonia); pneumoperitoneum; post-operative wound infection; and sepsis, any of which may require surgery or be fatal. Instruct patients to immediately report abdominal pain, prolonged constipation, nausea, vomiting, fever, or melanotic stool.

Patients treated with levodopa (a component of DUOPA) have reported falling asleep while engaged in activities of daily **living**, including the operation of motor vehicles, which sometimes resulted in accidents. Although many of these patients reported somnolence while on levodopa, some perceived that they had no warning signs (sleep attack), such as excessive drowsiness, and believed they were alert immediately prior to the event. For this reason, prescribers should reassess DUOPA-treated patients for drowsiness or sleepiness, especially since some of the events occur well after the start of treatment. Advise patients about the potential to develop drowsiness with DUOPA and ask about factors that may increase risk of **somnolence**. Consider discontinuing DUOPA in patients who report significant daytime sleepiness or episodes of falling asleep during activities that require active participation. For these patients, if a decision is made to continue DUOPA, advise them to avoid driving and other potentially dangerous activities that might result in harm if the patients become somnolent.

Monitor patients for **orthostatic hypotension**, especially after starting DUOPA or increasing the dose.

There is an increased risk for **hallucinations, psychosis, and confusion** in patients taking DUOPA. Hallucinations associated with levodopa may present shortly after the initiation of therapy and may be responsive to dose reduction of levodopa. Patients with a major psychotic disorder should not be treated with DUOPA.

Patients may experience **intense urges** while on DUOPA. Because patients may not recognize these behaviors as abnormal, it is important

for prescribers to ask patients or their caregivers specifically about the development of new or increased gambling urges, sexual urges, uncontrolled spending, binge or compulsive eating, or other urges while on DUOPA. Consider reducing the dose or discontinuing DUOPA if a patient develops such urges.

Depression has been reported in patients treated with DUOPA. Monitor patients for depression and concomitant suicidal tendencies.

Withdrawal-emergent hyperpyrexia and confusion, a symptom complex that resembles neuroleptic malignant syndrome (characterized by elevated temperature, muscular rigidity, altered consciousness, and autonomic instability), with no other obvious etiology, has been reported in association with rapid dose reduction, withdrawal, or change in dopaminergic therapy. Avoid sudden discontinuation or rapid dose reduction of DUOPA.

DUOPA may cause or exacerbate **dyskinesias**, which may require a dose reduction of DUOPA or other Parkinson's disease medications.

Generalized polyneuropathy has been reported in patients receiving DUOPA. Assess patients for the signs and symptoms of peripheral neuropathy before and periodically after starting DUOPA, especially patients with pre-existing neuropathy, patients taking medications, or those who have medical conditions associated with neuropathy.

Myocardial infarction and arrhythmia were reported in patients taking carbidopa-levodopa. Ask patients about symptoms of ischemic heart disease and arrhythmia, especially those with a history of myocardial infarction or cardiac arrhythmias.

DUOPA may increase the risk for **elevated blood urea nitrogen** (BUN) and creatine phosphokinase (CPK). Patients taking levodopa may have **increased levels of catecholamines** and their metabolites in plasma and urine, giving false positive results that suggest the diagnosis of pheochromocytoma.

Monitor patients with **glaucoma** after starting DUOPA, as it may cause increased intraocular pressure.

Drug Interactions: Monitor patients taking **selective MAO-B inhibitors** and carbidopa-levodopa for orthostatic hypotension. Concurrent administration with **antihypertensives** may result in postural hypotension, necessitating a dose reduction of the antihypertensive. Co-administration with **dopamine D2 antagonists**, **isoniazid**, or **iron salts** may reduce effectiveness of DUOPA.

The **most common adverse events** for DUOPA, with an incidence at least 7% greater than oral carbidopa-levodopa immediate release (CLIR), were (DUOPA vs CLIR): complication of device insertion (57% vs 44%), nausea (30% vs 21%), depression (11% vs 3%), peripheral edema (8% vs 0%), hypertension (8% vs 0%), upper respiratory tract infection (8% vs 0%), oropharyngeal pain (8% vs 0%), atelectasis (8% vs 0%), and incision site erythema (19% vs 12%).
